Boxers name .....

Vaccinations 1 Parvo .....

2. DHL with lept. ....

3. Rabies. ....

I start immunisations at five weeks. Although there still may be some passive immunity from their dam. I use modified live anti-parvo ones, followed by the 6 way modified live DHL ones. Before sale, I give the anti-rabies ones, although they not be recognized by the state, since I'm not a veterinarian.

- Worming**
1. Basic
  2. Anti-heartworm.

I do prophylactic worming on small puppies. At two week intervals, with micro-doses of Ivermectine. Also using this drug against heartworms and ear mites. You may get this drug, or its equivalent from your vet. Avoid the 6 month type drugs; they're dangerous and easily forgotten.

**Other Parasites.**

Fleas are easily evicted. Be sure to include house, garage, attics and vehicles.

Coccidia inhabit grass and are very debilitating on baby puppies. They may be controlled by 'Di-Methox' (sulfadimethoxine) added to their water. it's a powder which you may get from a vet. Supply house.

**Please take this to your veterinarian when you have your Boxer checked.**
